

Ferns and Petals (FNP) Sales Analysis Project Report

Project Title

Ferns and Petals (FNP) Sales Analysis Dashboard

1. Introduction

This project focuses on analyzing the sales performance of Ferns and Petals (FNP), a gifting company that delivers products for various occasions such as Diwali, Raksha Bandhan, Birthdays, Anniversaries, Holi, and Valentine's Day.

The objective of this project was to analyze customer purchasing behavior, product performance, sales trends, and delivery efficiency using Excel/CSV datasets and create an interactive dashboard for business insights.

The project was completed using data analysis and visualization techniques to help the business make data-driven decisions related to revenue growth, customer satisfaction, and product strategy.

2. Objective of the Project

The main objectives of this project were:

- To analyze overall sales and revenue performance.
- To understand customer spending patterns.
- To identify top-performing products and categories.
- To study monthly and occasion-based sales trends.
- To analyze delivery performance.
- To identify top cities contributing to maximum orders.
- To build an interactive dashboard for quick business insights.

3. Dataset Information

The project used **three datasets in Excel/CSV format**:

1. Customers Dataset :Contains customer-related information such as:

- Customer ID
- Customer Name
- City
- Address
- Gender
- Email
- Contact Number

2. Products Dataset

Contains product-related information such as:

- Product ID
- Product Name
- Category
- Price
- Occasion/Product mapping

3. Orders Dataset

Contains order transaction details such as:

- Order ID
- Order Date
- Order Time
- Delivery Date
- Delivery Time
- Quantity Ordered
- Customer ID
- Product ID
- Occasion
- Location

These datasets were connected using common keys such as Customer ID and Product ID for analysis.

4. Tools and Technologies Used

Tool	Purpose
Power Query	Data Cleaning & Initial Analysis
Microsoft Excel	Dashboard Creation & Visualization
CSV Datasets	Raw Data Source

5. Data Cleaning and Preparation

Before creating the dashboard, the datasets were cleaned and transformed.

Steps Performed:

- Removed duplicate records.
- Checked and handled missing values.

- Standardized date formats.
- Verified revenue and quantity columns.
- Created relationships between datasets.
- Created calculated measures for KPIs.
- Extracted month and hour information for trend analysis.

6. Key Performance Indicators (KPIs)

The dashboard includes the following major KPIs:

KPI	Value
Total Orders	1000
Total Revenue	₹35,20,984
Average Order Delivery Time	5.53 Days
Average Customer Spending	₹3,520.98

These KPIs provide a quick overview of business performance.

7. Dashboard Analysis and Insights

7.1 Revenue by Occasion

The dashboard compares revenue generated across different occasions.

Insights:

- Anniversary and Raksha Bandhan generated the highest revenue.
- Holi and Valentine's Day also contributed significantly.
- Diwali generated comparatively lower revenue.

Business Impact:

The company can focus more marketing campaigns and inventory planning on high-performing occasions.

7.2 Revenue by Product Category

The dashboard analyzes revenue contribution by product categories.

Insights:

- Colors category generated the highest revenue.
- Soft Toys and Sweets also performed strongly.
- Mugs and Plants contributed lower revenue.

Business Impact:

The company can increase promotions for high-performing categories and improve low-performing categories through discounts or bundled offers.

7.3 Revenue by Order Hour

This visualization shows sales trends based on order timing throughout the day.

Insights:

- Revenue peaks during evening hours.
- Orders are comparatively lower during early morning hours.
- Consistent order activity is observed throughout the day.

Business Impact:

The company can schedule advertisements and promotional campaigns during peak ordering hours.

7.4 Monthly Revenue Analysis

The dashboard tracks revenue fluctuations across different months.

Insights:

- February and August recorded the highest revenue.
- September and October showed lower sales.
- Revenue patterns are highly influenced by festive and seasonal occasions.

Business Impact:

The company can plan inventory and marketing budgets according to seasonal demand.

7.5 Top 5 Products by Revenue

The dashboard identifies products generating maximum revenue.

Top Products:

- Magnum Set
- Quia Gift
- Dolores Gift
- Harum Pack
- Deserunt Box

Insights:

These products are the major contributors to total sales revenue.

Business Impact:

The company should prioritize these products in promotions, advertisements, and stock management.

7.6 Top 10 Cities by Number of Orders

This analysis identifies cities placing the highest number of orders.

Insights:

- Imphal and Kavali showed the highest number of orders.
- Dhanbad and Haridwar also contributed strongly.
- Some cities showed moderate but consistent order volumes.

Business Impact:

The company can target these cities with location-based marketing campaigns and faster delivery services.

7.7 Customer Spending Analysis

The average customer spending value is ₹3,520.98.

Insights:

- Customers are spending a significant amount per order.
- Premium gifting products contribute to higher customer spending.

Business Impact:

The company can introduce personalized premium gift packages to increase customer retention and repeat purchases.

7.8 Order Quantity vs Delivery Time

The project also focuses on understanding delivery performance.

Insights:

- Average delivery time is approximately 5.53 days.
- Higher order volumes may slightly affect delivery efficiency during festive periods.

Business Impact:

Improving logistics and delivery operations during peak seasons can improve customer satisfaction.

8. Dashboard Features

The dashboard includes:

- Interactive slicers for Occasion, Order Date, and Delivery Date.
- Dynamic filtering for better analysis.
- KPI cards for quick performance tracking.
- Bar charts, line charts, and trend analysis visualizations.
- User-friendly and visually appealing design.

9. Business Recommendations

Based on the analysis, the following recommendations can help improve business performance:

1. Focus marketing campaigns on high-revenue occasions like Anniversary and Raksha Bandhan.
2. Increase stock availability for top-performing products.
3. Improve delivery operations during high-demand months.
4. Introduce offers for low-performing categories.
5. Use targeted city-based promotions for top-order cities.
6. Launch premium product bundles to increase average customer spending.
7. Optimize advertisements during peak order hours.

10. Conclusion

The FNP Sales Analysis Dashboard successfully provides insights into revenue trends, customer behavior, product performance, and delivery efficiency.

Through this project, meaningful business insights were generated that can help improve sales strategy, customer experience, and operational efficiency.

The dashboard enables stakeholders to make data-driven decisions quickly and effectively through interactive visualizations and KPI tracking.

11. Skills Demonstrated

This project demonstrates the following skills:

- Data Cleaning
- Data Analysis
- Dashboard Development
- Data Visualization
- Business Intelligence
- Business Insights Generation
- KPI Reporting

12. Future Improvements

Future enhancements that can be added to this project include:

- Customer segmentation analysis.
- Predictive sales forecasting.
- Profit margin analysis.
- Return/refund analysis.
- Regional sales performance analysis.

- Customer retention analysis.

13. Project Summary

The Ferns and Petals Sales Analysis Project is a complete business intelligence solution that transforms raw sales data into meaningful insights using Excel dashboards and analytical techniques.

The project highlights strong analytical, visualization, and problem-solving skills while demonstrating the ability to convert business requirements into actionable insights.
